

## RT-Image Most Valuable Product Awards

*Readers Choose Radiology's Most Valuable Products and Services*

In the sports world, teammates heavily rely on their MVP to bring them closer to success. At RT Image, we asked radiology professionals which products and services they considered to be MVPs. We're proud to present, for the first time, our list of the "best of the best" in radiology products.

### CR & DR Products

#### Two-Step X-Ray Patient Positioning Platform

##### **Clear Image Devices, LLC**

The design of the Clear Image Devices 2-Step Platform permits efficient and accurate X-rays of feet, ankles, and the lower leg - lateral-medial, medial-lateral, or anterior-posterior. The platform places the patient in the optimal position for easy capture of the highest quality weight-bearing and non-weight-bearing X-ray images.

This positioning platform is also designed with safety grab bars to provide stability for patients both young and old. The 2-Step Platform is also a portable device, able to provide easy positioning for weight-bearing poses, then can be moved out of the imaging suite with its built-in rollers and grab bars.

Designed for use with a Bucky or fixed cassette, the digital 2-Step Platform now supports the Canon CXDI 50G system.

*"I recently purchased a 2-Step Platform for our new office. I searched for many days to determine what product would best serve the needs of our foot and ankle specialists. Ultimately, I chose the 2-Step Platform by Clear Image Devices. There were several factors that led to this decision, including:*

- 450-pound weight limit
- Composed of materials that can be disinfected
- Appeared to be very stable and low to the ground
- Three imaging plate slots for imaging flexibility

*Upon receiving the product, I was very impressed. The platform was packaged with sufficient packing material to prevent damage during shipping. We used this product for approximately one month before ordering another unit for our other office.*

*We are a high-volume orthopedic practice who demands performance from all of our products. We provide orthopedic care for the Tennessee Titans (NFL) as well as the Nashville Predators (NHL) and depend on our products to function at a high level. I can recommend this product without reservation."*
