Pedia-Poser

Pediatric Positioning Chair

The Pedia-Poser provides fast, gentle, and secure immobilization of infants through 4-year olds for X-ray imaging. Its uniquely designed saddle seat, with detachable saddle horn, is form-fitting and very safe. The bench seat for older children includes a detachable saddle horn that aids in positioning. In either configuration, the saddle horn supports a protective genital lead shield.

Optimal Positioning Yields Best Possible Images:

Image Type	AP	Lateral	Oblique
C-Spine	X	X	X
Chest	X	X	
Abdominal	X		
Magnified Airway	X	X	

Clear Image Devices' series of patient positioning devices is the result of innovative research and design, responding to the expressed needs of radiographers. CiD produces only high-quality products that enhance medical care and promote the continued advancement of medical imaging.

- Immobilization is done gently but securely
- Eliminates virtually all retakes, saving time and money
- The patient is secured only once – the chair rotates, positioning for different views
- Keeps patient as close to the film as possible to ensure high quality images
- Adjustable back and head-tilt support fits patients of all sizes
- Critical chair components are X-ray lucent for excellent X-ray contrast
- Easy to keep clean, the Pedia-Poser is made from germ-resistant, non-porous polyethylene
- High quality lockable casters provide mobility & stability
- Simple, reliable, and virtually indestructible
